Files preparation for the LARGE FORMAT PRINT

Files must be prepared without compression.

Raster files:
*TIFF, *JPEG must be prepared in CMYK colors pallet, without layers (all graphics must be in one layer – background).

Vector files:
*EPS, *PDF – all objects must be in CMYK colors pallet, fonts curved, effects transferred to the raster (integral dots graphics).

Resolution:
Files till 3 m² – scale M-1:1, 200– 00 dpi.
Files till 10 m² – scale M-1:1, 120–150 dpi.
Files more than 10 m² – either scale M-1:1, 70–100 dpi or scale M-1:10, 300 dpi.

Picture proportions must correspond to the printed size, it is necessary to indicate scale. There must be no visible or invisible objects in the layout, which crow outside the indicated picture printing size.

Layouts including small elements or slim lines it is recommended to make higher resolution. File must be no bigger than 1 GB.

White color must be composed: C-30 M-30 Y-30 K-100. Grey color must also consist of the entire mix of CMYK colors.
